Hennecke at UTECH EUROPE 2009 from 31 March to 2 April in Maastricht, Stand No. 1470

Tried and tested technology plus many new ideas – Hennecke at UTECH EUROPE

At this year's UTECH EUROPE in Maastricht, Hennecke is showcasing one of the most comprehensive ranges in terms of PU processing. The traditional, Sankt Augustin-based company near Bonn wants to win over interested visitors to the exhibition not only with its machine and plant technology, but mainly with its specific process technology and long-term experience and competence in finding solutions.

Anyone at the UTECH EUROPE who wants competent and comprehensive information about the latest developments in PU processing technology will be in the right place at the stand of PU specialist Hennecke. A variety of products on display will illustrate the unique selling points of Hennecke equipment to all interested visitors to the exhibition. Apart from presenting the latest developments in machine technology, the inventor and manufacturer of the first PUR reaction casting machine will also

showcase innovations in process and processing technology. The state-of-the-

art PUR Composite Spray Moulding (PUR-CSM) process highlights Hennecke's leading role in terms of technology and will ideally stimulate a whole range of ideas for new products from visitors to the exhibition. PUR-CSM comprises different technological variants for producing fibre reinforced and unreinforced components in spray technology. Hennecke's machine concept excels especially because of its flexibility and the high spray quality.
