

## PRESS RELEASE

### Innovation for retrofitting

**With its new constant pressure injector, Hennecke offers its customers a patented innovation for fast and simple retrofitting. The low-maintenance injector optimises a machine's performance effectively and brings further significant benefits to the production process. The patented high-tech component also marks the start of a whole series of special offers for efficient upgrading as part of Hennecke GmbH's 360° spare parts service.**

The newly developed constant pressure injector is much more than just a replacement, offering real added value in any production process that uses

Hennecke metering and mixhead technology. For example, there is a significant increase in production efficiency thanks to the flow-optimised injector geometry. And because generally a lower operating pressure is needed, there is less wear and noise development in the metering pumps, and the energy consumption of the whole metering system is reduced. The constant pressure injector also offers the user more flexibility within the production process because changes in output are possible from shot to shot without any further adjustments having to be made to the injector. Product changes can thus take place both rapidly and cost-effectively. Moreover, the component also wins points in terms of operating safety. Thanks to the automatic readjustment of the throttle gap, any dirt particles are very easily rinsed out.

Retrofitting is surprisingly easy and can be done in no time at all and without having to use special tools – just two screws have to be loosened. Not only is it very simple to install the injector but it is also very easy to use. For adjusting the respective injection pressure, the adjusting nut simply has to be turned by hand.

The constant pressure injector, which offers an attractive price-performance ratio, is already available in different versions for high-pressure mixheads of the MX, MN and MT series. In future, the 360° spare parts service will be expanded by other innovative retrofitting measures that are tailored to customer needs and efficiency. More than just a replacement part – innovation for retrofitting.
