Strategic partnership between Hennecke and CPS

Hennecke GmbH in Sankt Augustin near Bonn has long been a competent partner when it comes to elastomer plant technology. In order to make tailor-made solutions available to the customer worldwide, the machine and plant manufacturer has now signed a cooperation contract with the Austrian company CPS - Customer Polymer Solutions GmbH. The two PU experts are aiming to attain far-reaching synergy effects through this strategic partnership. On top of consistently expanding worldwide distribution structures, elastomer processors will especially benefit from new and further developments in the field of machine technology.

The demand for PU cast elastomers has grown continuously over the past few years. Hennecke met the challenge from the start by introducing innovative systems whose design can be adapted to the customer's needs and is equipped with consistent temperature control. The partnership with CPS now provides a basis for optimising modern processing technology on the one hand and making it even more popular at an international level on the other hand. The Austrian company will bring ample and detailed knowledge to the partnership - CPS CEO Arno Petter has over 30 years experience in elastomer plant engineering. For this reason, close cooperation with Hennecke seems a logical step for Petter: "The partnership with Hennecke shows that there is still significant potential to be tapped within a specific market segment. On top of that, our cumulative competence will offer the chance to react to the concrete needs of the market in a flexible manner".

And recently this increase in flexibility can also be observed in the utilisation of appropriate raw material systems. From now on users can employ all common cast systems. This has partly been made possible by Hennecke's disengagement with Bayer, confirms Hennecke CEO Rolf Trippler: "Thanks to our fully independent position towards all raw material suppliers, we can use whatever system best suits the specific demands of our individual customers. That increases quality and customer satisfaction in equal measure".
