

HENNECKE PRESS RELEASE

Hennecke at the K 2007 - 17th international Trade Fair for Plastics and Rubber, 24-31 October 2007 at Messe Düsseldorf, hall 13, stand B63

Hennecke at the K - Let's talk about PUR

Hennecke GmbH - one of the leading manufacturers of polyurethane technology - will be presenting state-of-the-art machinery and plant technology at the world's largest trade fair for plastics and rubber. The focus is both on well-proven and new products.

For more than half a century, Hennecke has successfully developed PU processing technology. At this year's K trade fair, the inventor of the first high-pressure metering machine will present a system designed for metering particularly small outputs with high precision. These are typical, inter alia, in automotive applications. A minimum output of approx. 5 g/sec per component, for instance, is suitable for implementing high-quality PU car interior parts such as gear shift knobs, cable inserts or small back-foamed parts. The machine concept is based on the successful TopLine high-pressure metering machine. Adapted to your process parameters, the MicroLine already comes with extensive standard equipment including frequency-controlled motors, component temperature control and an intuitive touch-screen control system.

Besides presenting its machines and mixheads, the polyurethane specialist from the Rhineland is planning to offer information about various trend-setting technologies. PU processors will learn about new possibilities and areas of application. Technology variants such as the PUR-CSM process have already proven successful in practice. Hennecke will provide impressive proof of this success by exhibiting a selection of high-quality parts manufactured with different CSM applications.

Information and communication with the customers is the primary focus of Hennecke's stand. It counts among the most spacious stands in the history of the machinery manufacturer and is characterised by a largely open design. The good accessibility should enable customers to get a quick overview of the Hennecke portfolio. In addition, the competence areas of the individual product lines will present a comprehensive collection of sample parts. Thus, Hennecke does justice to its technological variety not only in theory, but offers hands-on innovation.

Besides presenting machine and plant concepts as well as sample parts, a team of experienced experts from all fields of application will be seeking dialogue with the customers. This is why the trade fair presence is placed under the heading "Let's talk about PUR", which at Hennecke is synonymous with qualified consulting and know-how when it comes to tailor-made customer solutions.
