

HENNECKE PRESS RELEASE

Hennecke at PU TECH from 12 to 14 March 2008 in New Delhi,
Hall 1, booth 052

Potential²: Hennecke equipment and India, the market of the future

At this year's PU TECH in New Delhi, Hennecke GmbH will present itself with one of the largest ranges of polyurethane processing equipment on offer. However, based on the motto „Let's talk about PUR“, the machine and plant manufacturer primarily intends to convince customers on the subcontinent by its long-standing experience and problem-solving competence.

For visitors to the PU TECH intending to obtain competent and comprehensive information about polyurethane processing, the Hennecke booth is the right place to attend. Thanks to a great number of exhibits, potential customers will learn about the unique characteristics of the Hennecke equipment. Apart from latest developments in processing technology, the inventor and manufacturer of the first PU foaming machine focuses on the presentation of "classic" core polyurethane processing technologies: „High-tech applications ensure our technological leadership role while opening up new fields of application in polyurethane processing. Our major exhibit, however, is our multiple expertise. India is a market of the future with enormous potential.

Polyurethane processors mainly benefit from tried and tested technology that offers optimum results even under tough conditions," says Ercihan Kurt, Hennecke's Marketing Manager in charge of the Indian market.

What a great demand there is for

top-quality technology in India, is not least proven by the order intake. In India, Hennecke has

already brought on stream a considerable number of HK machines and various slabstock and sandwich panel production lines.
