

PRESS RELEASE

Added value, made by Hennecke – the new QFOAM

Hennecke GmbH has always drawn on its vast experience to ensure that there is an optimal solution and great practical advantage for each user and each application, and has now created a new generation of extremely compact metering machines that use well-tested Hennecke technology – the QFOAM series.

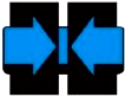

The first system for mixing components under high pressure was developed up to series production maturity by Karl Hennecke in the 1950s. With the new QFOAM, the machine manufacturer for the first time presents a metering machine that has been designed and constructed consistently as a series product. The two-component machine combines the advantages of PU high-pressure technology with an excellent price-performance ratio in a particularly impressive way. As QFOAM also offers the user the benefits of the machine manufacturer's comprehensive expertise and quality, the new type series is an ideal substitution for low-pressure technology and its inherent disadvantages.

The QFOAM machine concept comprises a newly-developed air-cleaned mixhead and tried-and-tested metering technology from the BaseLine and TopLine series.

This combination offers PU processors precise component metering and excellent mixing quality for many applications in all kinds of areas. The output can range from 100 – 1,500 g/sec depending on the size of the machine. The hand-operated mixhead is used for cold-curing flexible foam, compact systems, filling foam, integral skin foam, energy-absorbing foam and

rigid insulating foam.

Thanks to the extremely compact structure and plug-and-play installation that is typical for Hennecke, **QFOAM** can very easily and rapidly be integrated into the production process – even if the user is new to PU. The delivery times are also fast. Because of optimized production logistics **QFOAM** can be on its way to the customer shortly after an order is placed. From this moment on, at the very latest, the customer will benefit from Hennecke's excellent service and comprehensive advice on everything that has to do with the new metering machine.
